# Sprint Retrospective 3

GROUP K

Statistics of the sprint

- In this sprint, we decide to attend 16 new stories and we finished 13 of them.

- Total points of all stories are 124 (without the new stories), and we committed 34 of them and delivered 25.

Statistics of the sprint

Statics of the time repartition

- Estimating time was 60 hours.
- We have 3 tasks per stories approximately.
- The rate (time spend/time expected): 73/60=1,21

Cause of error

- Agreement between the member of the team

- Modification in the structure of the project

What we have learned?

- Improve the quality of the communication in the team
- Improved skills in Django Python

We are proud of

- Finish the stories of the previous sprint and reduce the technical debt

- Improve our skill with the new languages

- Fixed the bugs that we had in the previous sprint

The improvement for the next sprint

- Be more efficient in our work, to reduce the ratio real time/expected
- Communication in the team
- Finish the stories and compensate the technical debt
